

MARK MAGWEREGWEDE

Junior Software Developer

Address: 1194 Milkwood Road, Westgate, Harare | **Phone:** +263 784 705 316 | **email:** magweregweede10@gmail.com |
GitHub: <https://github.com/magweregweede>

OBJECTIVE: I seek to join an organisation/company that can optimally utilise my skills in positions requiring resourcefulness, innovation and critical thinking to drive Modern Computing and ICT needs of the Fourth Industrial Revolution and beyond. My long-term objective is to isolate myself as a Thought Leader in the Global ICT and Modern Computing space.

EDUCATION: **BACHELOR OF SCIENCE DEGREE COMPUTER SCIENCE** 2025
Degree Class: 2.1
University of Zimbabwe, Harare, Zimbabwe

- CERTIFICATIONS:**
- AWS Cloud Practitioner CLF-C02
 - ISC2 Certified in Cybersecurity (ISC2), 2025
 - HarvardX CS50: Introduction to Computer Science, 2024
 - IT Masters, Introduction to CyberOps, 2024

- SKILLS:**
- Programming: Python, Java, C, PHP
 - Web Development: HTML, CSS, JavaScript, Django, Flask
 - Machine Learning & AI: TensorFlow, PyTorch, Scikit-learn.
 - Data Analytics and Visualisation: SQL, Power BI, Python, Excel
 - Networking: Network Configuration, Optimization and Troubleshooting, Network Operations Centre (NOC) Procedures, Quality of Service (QoS)/ Quality of Experience (QoE) Monitoring, IP Infrastructure Design
 - Enterprise Systems: SAP ERP (MM, Financial SCM), Windows Server, Active Directory
 - Version Control: Git, GitHub
 - Project Management
 - Technical Documentation and Reporting
 - Helpdesk Ticket System for user assistance and resolution.

WORK EXPERIENCE: **JUNIOR PROJECT LEAD** July 2025 – Present
Zimbabwe Digital Security, Bulawayo, Zimbabwe

- Assisted in planning, implementation, monitoring and delivery of technology projects involving software, network systems, cloud-connected security solutions and Internet of Things (IoT) platforms.
- Coordinated the deployment and integration of software and hardware systems, including IP surveillance, access control and remote monitoring solutions.
- Analysed network and system performance metrics to ensure compliance with Service Level Agreements (SLAs) and identify opportunities for optimization.
- Collaborated with cross-functional technical teams to troubleshoot, optimize and maintain high-availability systems across multiple client environments.
- Participated in solution architecture discussions ensuring secure, scalable and reliable

deployment of networked systems and cloud-connected infrastructure.

- Managed project documentation, technical specifications, implementation plans and post-deployment evaluations to ensure successful project outcomes.

NETWORK SYSTEM TECHNICIAN

January 2025 – June 2025

Zimbabwe Digital Security, Bulawayo, Zimbabwe

- Installed, configured, and optimized business and residential networks ensuring Quality of Service (QoS) and minimal downtime, improving coverage and eliminating dead zones for enhanced user experience.
- Performed root cause analysis and resolved connectivity incidents using diagnostic tools.
- Collaborated with solar experts to integrate solar power solutions to support off-grid network systems, ensuring reliable internet connectivity in remote areas.
- Implemented secure network authentication with firewalls and physical access controls to strengthen network access and network management.
- Installed and configured comprehensive digital security with IP cameras, alarm systems and access control systems that are linked to the cloud to enhance client security infrastructure.
- Provided technical support and client engagement, troubleshooting issues and addressing customer queries.

IT INTERN

August 2023 – July 2024

Schweppes Zimbabwe Limited, Harare, Zimbabwe

- Developed SENDit, a trip-logging system for Schweppes staff to plan and record distribution trips, cutting logistics costs.
- Played a key role in the implementation of SZL SharePoint, a Document Management System and assisted users to adopt digital signature methods to reduce hard copy document storage in SZL and cut business costs.
- Assisted in the implementation of fingerprint access control in IT and Production departments to prevent unauthorized access to restricted areas.
- Gained firsthand experience with SAP ERP particularly in Materials Management and Production modules.
- Troubleshooting issues with software and hardware via Spiceworks helpdesk and onsite visits.
- IT Client monitoring and management for PABX system.
- Managed Active Directory account enrolment and use to ensure compliance to SZL Computer Security Policy.
- Collaborated on CAPEX and OPEX budgeting for network infrastructure projects.
- Server management tasks: Scheduled data backups for disaster recovery and regular updates to the servers.
- Monitored network uptime, ensuring availability and stability of SAP and SharePoint systems.

PROJECTS:

- Plumtree Bakery, Plumtree – Installed and configured a 75-camera IP surveillance system connected via structured network cabling. Integrated centralized monitoring for real-time footage streaming and bandwidth-efficient video transmission. Ensured
-

optimal network performance, low latency, and consistent QoS.

- IBT College, Bulawayo – Installed and configured 10 IP cameras with network cabling and a 16-zone IoT-enabled Alarm System featuring Internet of Things (IoT) switches and detectors. Integrated remote management capabilities via cloud monitoring for campus-wide security efficiency.
- Bakers Inn, Harare – Set up four access control points for a new production plant with remote enrolment and remote monitoring, ensuring secure access management and centralized control through IP-based connectivity and high-availability infrastructure.
- SENDit (Trip Logging System) – Developed a digital trip-logging solution for Schweppes Zimbabwe to monitor logistics fleet operations, automate route data capture and optimize delivery planning – resulting in reduced data entry errors and operational costs. [GitHub - magweregwe/SENDit: Trip logging Web application for SZL](#)
- TripAI (Logistics Analytics Platform) – Built a real-time analytics platform using Django, SQL, and Power BI to visualize logistics KPIs, trip performance and predictive travel time analysis for better route efficiency decisions. [GitHub - magweregwe/HCS-Final-Project: DESIGN OF A WEB-BASED REAL-TIME DATA MANAGEMENT AND ANALYTICS PLATFORM](#)
- Sky Insight – Collaborated on an AI assistant that is focused on providing climate change trends to farmers to assist them in predicting weather patterns.
